

How Can Generative AI (GenAI) Accelerate Building Information Management at Federal Agencies and Private Enterprises

Jay Kline, Director, Project Management, NIBS

Stephen R. Hagan, President and CEO, Hagan Technologies LLC

Charles Hardy, Chief Architect, Public Buildings Service, General Services Administration

Ivan Panushev, CEO and Co-Founder, TwinKnowledge

Julia De Rossi, Deputy Assistant Commissioner, General Services Administration

Generative AI Definition

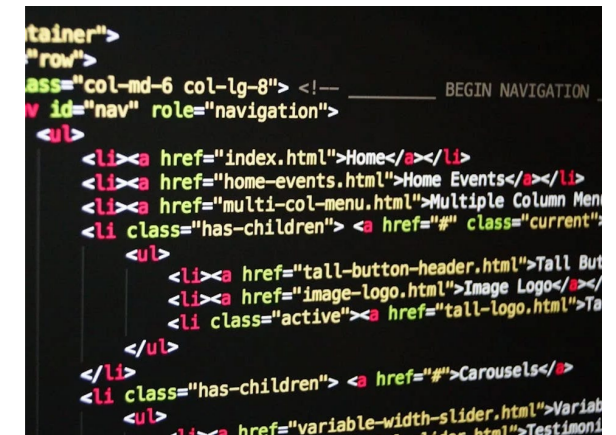

Generative AI is a type of AI that is trained on data. It can create new content and ideas including text, images, videos, and code.

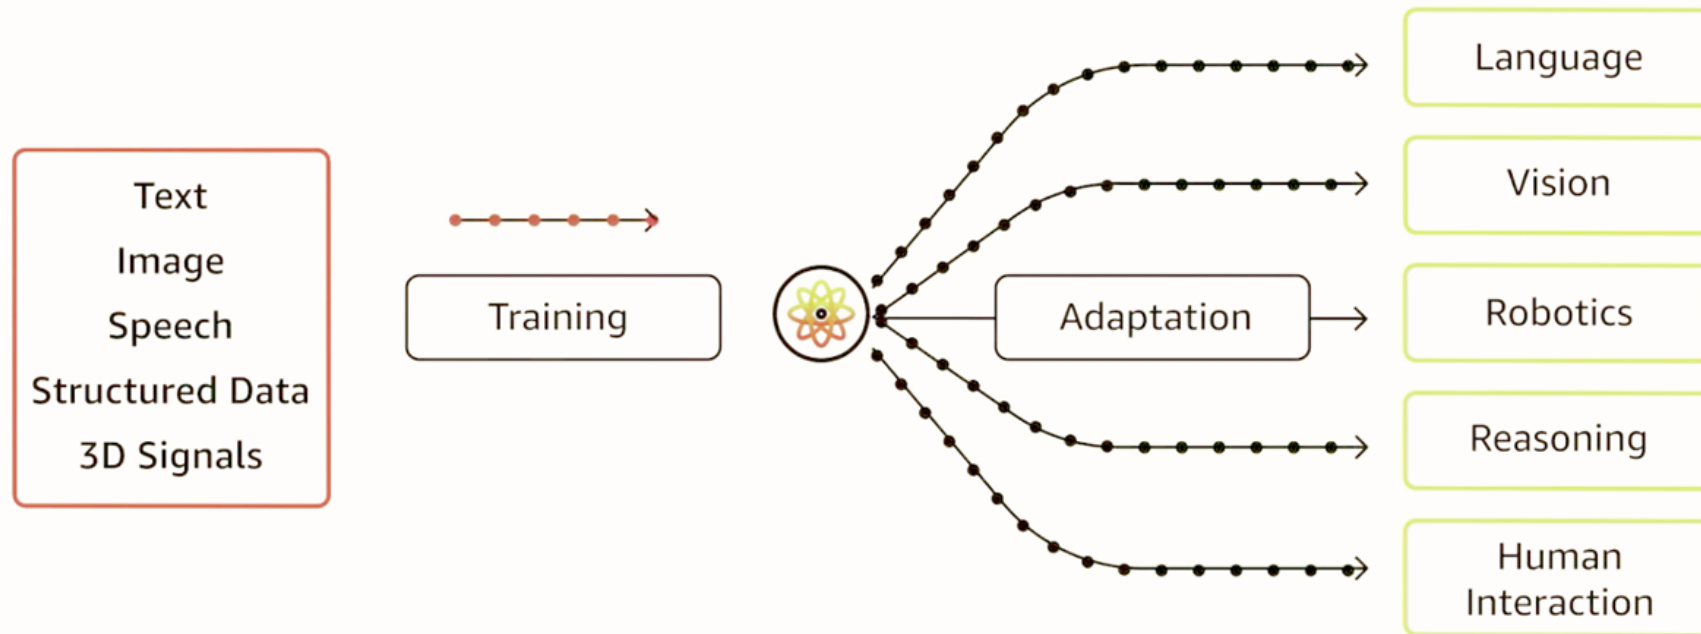

Building Information Generation

Digital representation of physical and functional characteristics of a built asset.
Shared knowledge resource for information about a built asset forming a reliable basis for decisions from earliest conception to demolition.

Data for Foundation Models

Foundation Model

Large models that are pre-trained on vast amounts of data. Foundation models provide a base, or foundation, on which more specific models can be built, and are trained on large sets of broad and general data.

Types of Foundation Models

Large Language Models - LLMs

Foundation models are trained on human language.

LLMs form the basis of text-based generative AI applications such as OpenAI's ChatGPT.

Why is Now **the Best Time to Embrace** Generative AI?

**Lower cost and
accessibility of
compute**

**Availability of large-
scale data sets**

**Development of the
Transformer model
architecture in 2017**

Why is Now the Best Time to Embrace Generative AI in AEC?

41%

**of Construction
Professionals Will
Retire by 2031**

**National Center for Construction
Education & Research*

35%

**of Time
Professionals Spent
on Non-optimal
Activities**

**FMI Research*

40%

**of Direct or Indirect
Global CO2 Emissions
Result from
Construction**

**McKinsey Estimates*

Competitive Differentiation using GenAI

“The reality that’s going to hit home in the next six to 12 months is Generative AI is just as difficult as ‘traditional’ AI.

“Shaping generative AI systems created from existing models and services will deliver applications most likely to offer competitive differentiation.”

- Eric Lamarre, Senior Partner leading McKinsey Digital

“Over-leveraging a general-purpose AI platform is unlikely to confer competitive advantage.”

- Michael Carbin, Associate Professor, MIT

Many traditional Machine Learning algorithms can be reformulated as Generative

Traditional classification

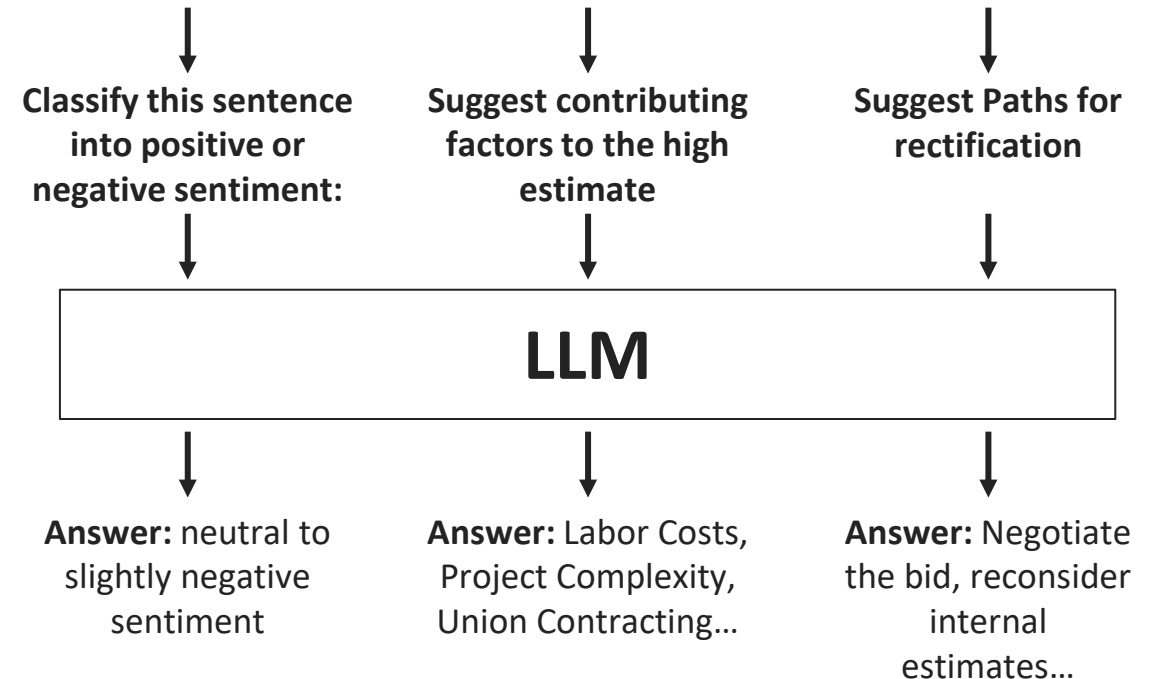

Text: This subcontractor bid meets the schedule but is above our internal estimates.

Sentiment: Negative

Using generation to classify text

Text: This subcontractor bid meets the schedule but is above our internal estimates.

Enterprise Use Cases in AEC

Planning, Design, and Engineering

- Get design suggestions based on past projects
- Generate construction product specifications
- Validate submissions for building code compliance

Environmental, Health and Safety (EHS)

- Identify EHS risk from project documents, real time or historical data
- Generate project-specific EHS plans
- Extract insights from EHS reports

Skills and Knowledge Development

- Extract knowledge from drawings, BIM, specs
- Create micro-learning from training plans
- Interpret complex compliance and standards documents

Construction and Handover

- Optimize supply chain dependencies
- Compile handover documentation
- Generate bid documents based on past projects
- Data cleaning, processing, classification, tagging

Current Challenges of Implementing GenAI

Accuracy

- Hallucination
- Factually incorrect statements
- Misleading information

Currentness

- Outdated information
- Keep content up to date
- Time-aware answers

Safety

- Ensure outputs don't pose risks to users
- Avoid generating harmful or biased content
- Mitigate data leakage or privacy breaches

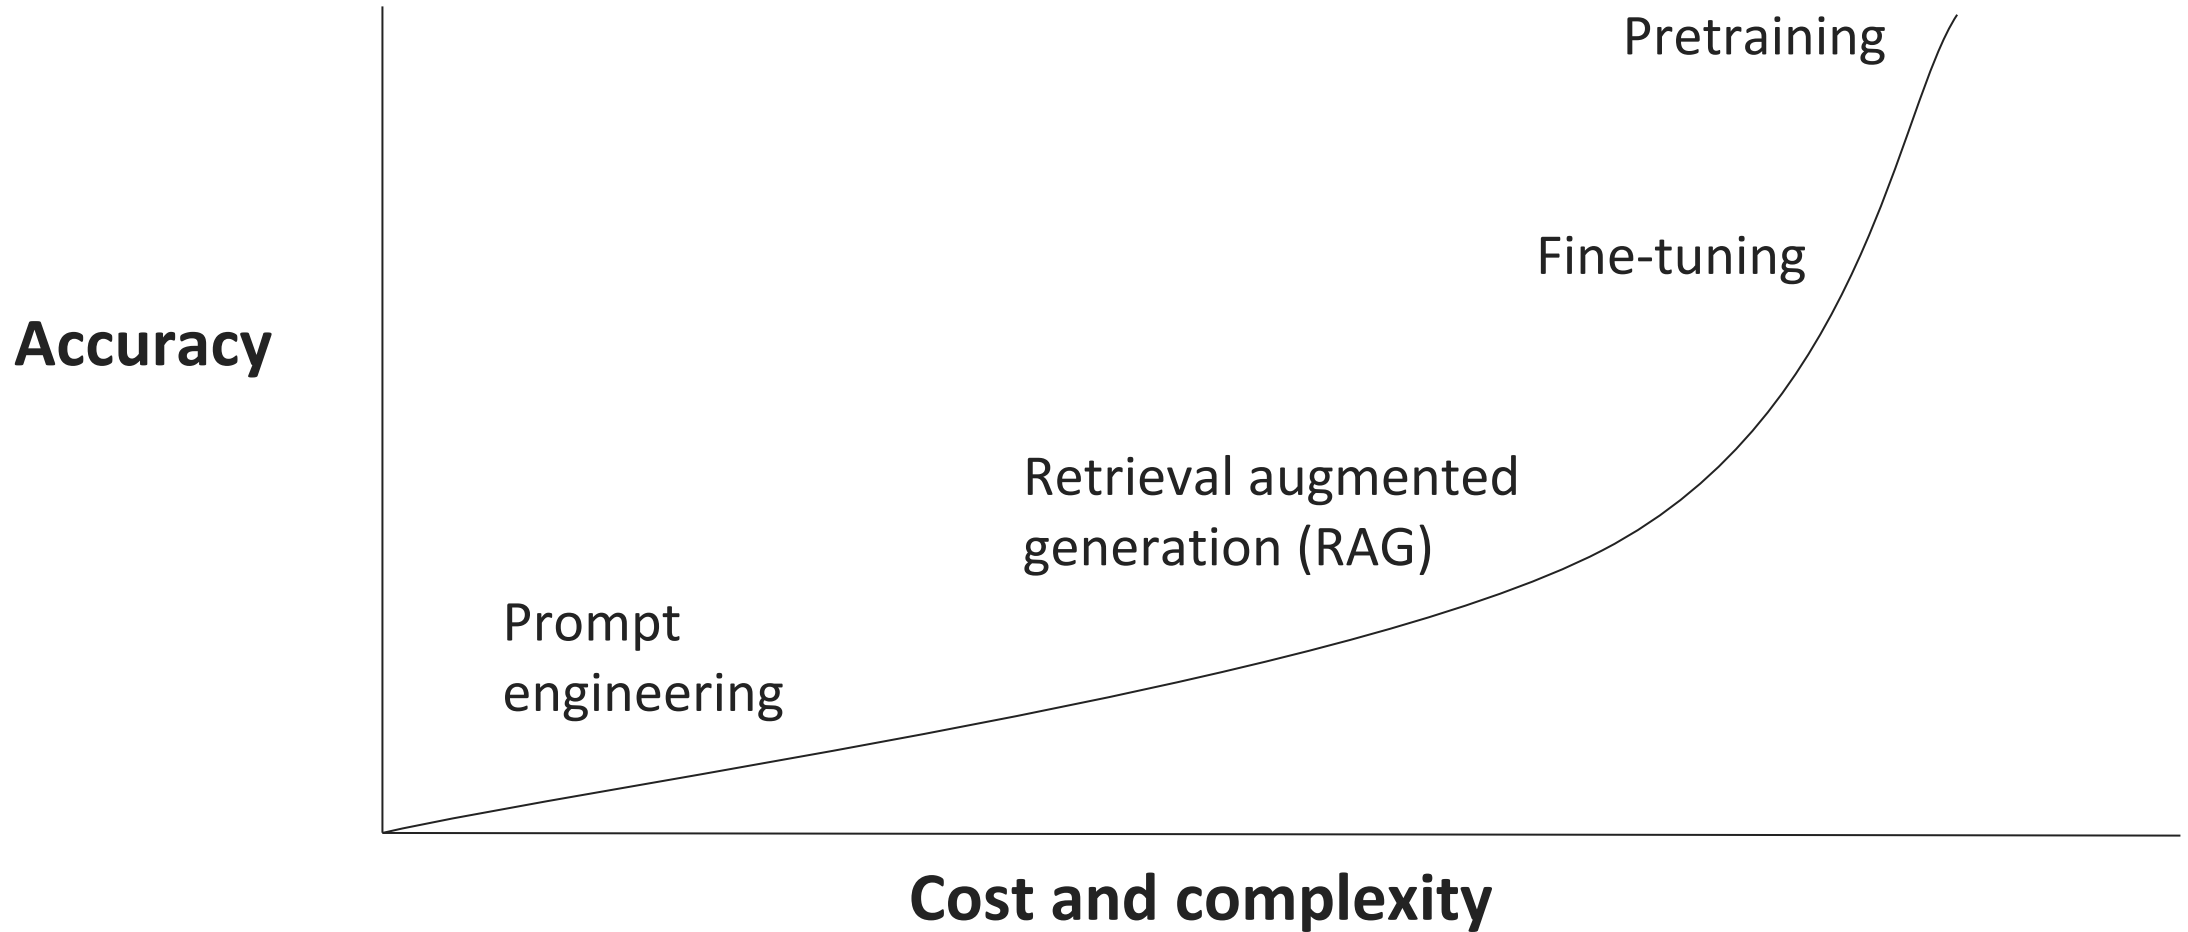

Enterprise Context Awareness

- Company-specific data
- Unique processes
- Requirements

Cost Efficiency

- Deployment costs
- Maintaining enterprise data
- Higher relative cost for smaller firms

There are many ways to **customize a model** for **government agencies and AEC firms**

How to deploy GenAI at agencies and AEC firms

Define the scope

Does the internal customer want this?

Can your organization do this?

Should your organization do this?

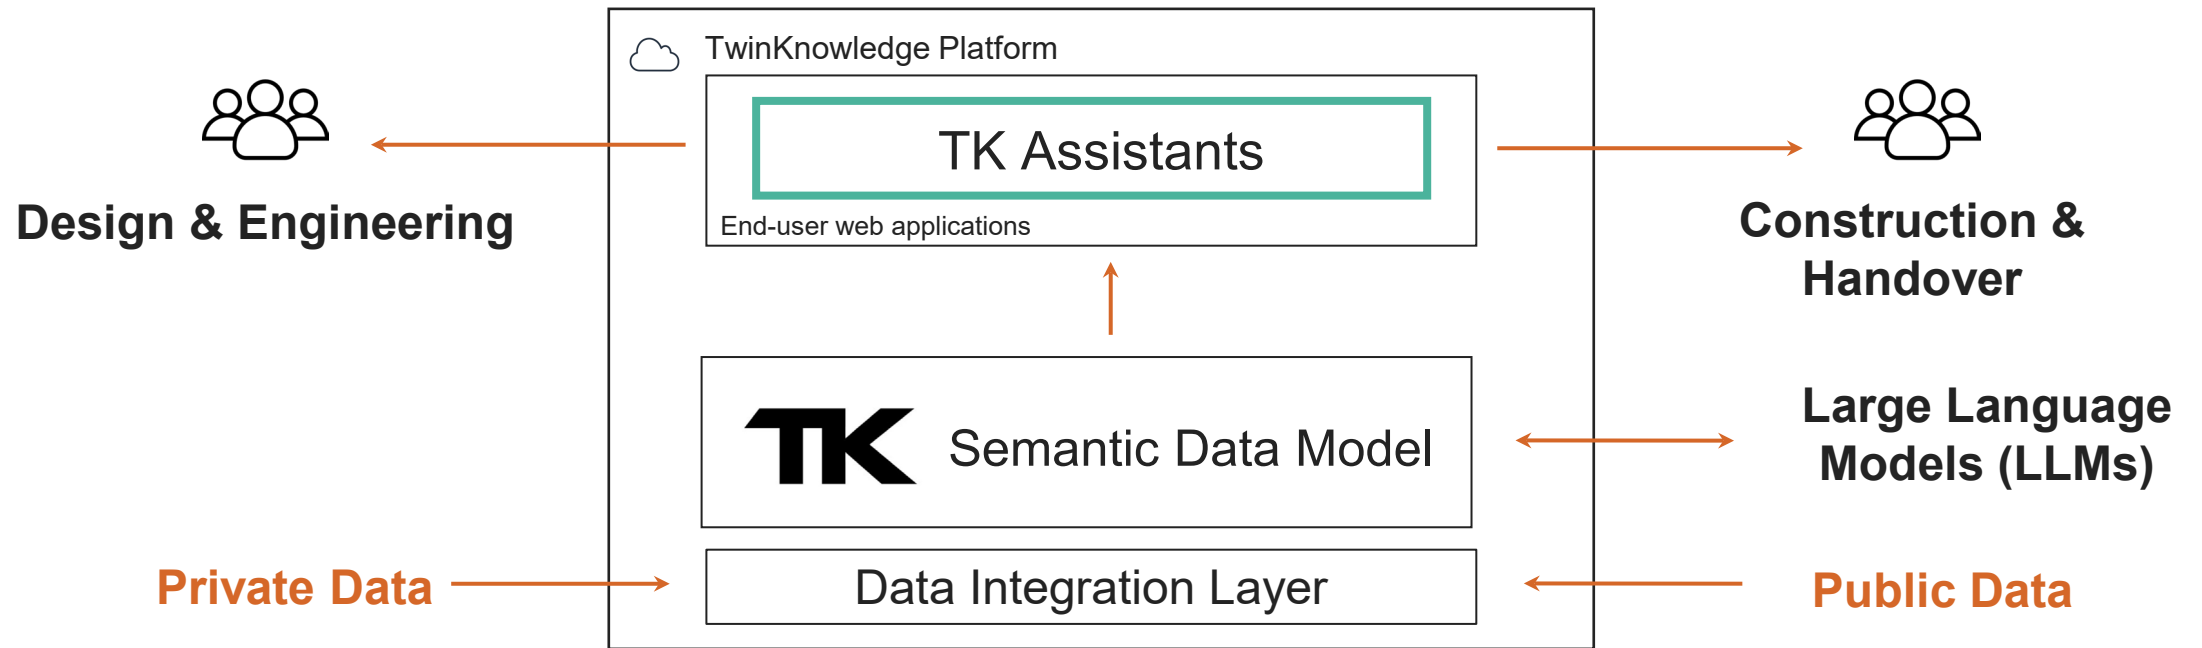

Evaluate the use of GenAI

Understand accuracy

Intellectual property

Disruption of common workflows

GenAI @ TwinKnowledge: How it works

TwinKnowledge: How does it really work?

The screenshot displays the TwinKnowledge web application interface. The browser address bar shows the URL: `sandbox.twinknowledge.com/167f4427-227b-492d-acbc-4ff6ad9d4f0b`. The left sidebar contains a navigation menu with the following items:

- TwinKnowledge
- COPILOTS
- 2 Park Place
- 145 Cambridge St
- BK Arena
- 5 Park Place
- Product Advisor
- 232 Park Ave
- 575 Lexington Avenue
- CAD/BIM Copilot
- Pier 4
- ADA Copilot
- BIM DC
- 300 Washington Plaza (selected)
- SOURCES
- tk-demo-data-source
- Data Source 1
- ivan@twinknowledge.c...
- Users
- Logout

The main content area is titled "300 Washington Plaza Knowledge Base". Below the title, a description states: "TwinKnowledge Bases provide your AI assistant with contextual information from your company's private data sources to deliver more relevant, accurate, and customized responses."

The interface is divided into two main sections:

- Source Data:** This section includes a "Manage sources" button and a list of data sources: "Public BIM data" (20 entities) and "Unstructured Data" (285 entities). A large play button icon is centered over this section.
- Conversations:** This section displays a list of recent conversations with timestamps and question snippets:
 - What is the status of the mockup panels? (May 17, 2024 at 09:17 PM)
 - What are the most frequently used BIM files on the project? (May 17, 2024 at 09:13 PM)
 - What project used Horizontal High Efficiency pump? (May 17, 2024 at 09:11 PM)
 - What are the most frequently used BIM files on the project? (May 17, 2024 at 09:10 PM)
 - What project used Horizontal High Efficiency pump? (May 17, 2024 at 09:09 PM)
 - How much do I need to reduce my energy usage to comply ... (May 17, 2024 at 09:09 PM)

A "Start conversation" button is located at the bottom right of the main content area.

BIM Maturity Challenges

How Can Generative AI (GenAI) Accelerate Building Information Management (BIM) Maturity at Federal Agencies and Private Enterprises?

Barrier to Entry

Fragmentation

BIM Maturity Challenges

How Can Generative AI (GenAI) Accelerate Building Information Management (BIM) Maturity at Federal Agencies and Private Enterprises?

Lack of Unified Standards

“We do it differently and need different standards”

Data Management Resourcing

Resource challenge for large portfolio owners to manage datasets to enough of a critical mass to realize measurable and perceived benefits

Barrier to Entry

More data and technology takes more investment, small stakeholders less willing and less able

Fragmentation

Data Handover, Model Handover, Continuity challenge (especially at agencies)
